

The jobs contained in this zip file are samples of how to use SurfaceFX. For SurfaceFX control, the In-Sight vision system is either in MASTER mode or SLAVE mode:

MASTER Mode: Self-triggers based on an external input and controls the light with each self-trigger.

SLAVE Mode: External source triggers In-Sight and the light.

In-Sight Master	In-Sight Slave
In-Sight with Integrated Light <i>IS7000GII only</i>	In-Sight with External Light and External Controller <i>IS8000, IS7000GII and IS5705 Series</i> With motion examples!
External light with CIO-MICRO <i>IS8000, IS7000GII and IS5705 Series</i>	
External light with Built In IO <i>IS7000GII only</i>	

These are samples that have been deployed in the field and are working at their locations. SurfaceFX deployments are not limited to these sample jobs but they will give a good example of what can be done and will aid in the setup.

Good Luck!
